

STATE OF OKLAHOMA
DEPARTMENT OF HIGHWAYS
PLANS AND SURVEY DEPARTMENT

FLOOD INFORMATION FORM

To be used in obtaining and transmitting flood water elevations for Plans & Survey office record files. This information to be obtained by all Chiefs of Party in their vicinity in times of unusual high water, or at any time available from a reliable source. The elevations can be recorded by level reading, by measurement from bridge floor, in relation to a house, above roadbed or any other dependable, clear manner that fits the situation, the highest order possible to be used. Separate report to be made on each crossing or place obtained.

County Caddo Date highwater occurred Oct. 3, 1955

Highway number SH 58 Name of stream Deer Creek

Direction and distance from nearest town, village or store 1/4 mile south of Hudson

Section, Township and Range Sec. 4, T12N, R13W

Description of Location At existing low-water bridge over Deer Creek on SH 58

Method obtained tape measurement from bridge floor

Elevation 2.8 above Br. Floor Source of levels _____

Was highwater mark obtained from actual water, drift, local resident, U. S. Engineers, etc? _____

Obtained by measurement by tape from bridge floor to a very well defined silt mark hole on bridge steel.
Explanatory Remarks _____

Obtained on Oct. 6, 1955 by Gaines H. Stout & E. E. Kauffman, the road south of bridge had been blocked by 2 feet of silt washed in after about a 4" rain.

Location to be shown on back of this sheet as a check.
Not. I would consider this a normal highwater mark that would occur about once each year in normal rain fall.

Field Note: To be sent to Engr. of Plans & Survey (1 copy).
Office Note: To be filed in Flood Information by Counties.

Gaines H. Stout
